UNITED SECURITY PROVIDERS

PROTECTING WHAT MATTERS.

WELCOME TO A SECURE FUTURE.

Information and business processes constitute the «capital» of a successful company. Modern information technology enables quick utilisation of important information and acceleration of business processes. The fact that these opportunities also carry inherent risks is evident: companies increasingly need to protect themselves against digital

threats in order to realise their commercial objectives. United Security Providers helps companies to maintain effective protection against such risks. We partner with our clients during their growth and keep threats and risks at bay. To allow them to explore and take new avenues, without jeopardising their information security.

SECURITY MEANS ADAPTATION.

Authorised access to company networks and applications, as well as the secure integration of clients and mobile employees seem to be simple wishes of customers. However, providing the right security solution to such needs requires a detailed understanding of company processes and in-depth technical expertise. But no matter

how unique the businesses of our clients are, their security solutions need to be based on the tried and tested, and be largely standardised and scalable. This serves to simplify processes as well as systems, enabling the company to adapt quickly and effectively to new situations. Only then will information security be effective.

SECURITY IS A WELL THOUGHT-OUT CONCEPT.

The range of services offered by United Security Providers combines across-the-board standardisation with individualisation. Specialist knowledge about organisational and process matters included. It enables us to give our customers cost-effective access to a unique offering, and to adapt it precisely to their changing needs.

- **Secure Network Access:** Protection of company networks by imposing strict access controls on all end-user devices.
- **Secure Application Entry:** Protection of company networks with Internet access and access control for applications and data (e.g. online banking).
- **Identity and Access Management:** Administration of digital identities, authorisations and passwords via an enterprise-wide management system.
- **Enterprise Network Services:** Secure networking of multiple company sites, mobile users and home offices.

Transparent and available round the clock: the information security we provide is available as a 7x24 hour «managed service» – professionally monitored and operated. For productive days and peaceful nights.

SECURITY IS OUR BUSINESS.

In today's competitive environments, security and operational freedom are often contradictory to each other. We surmount this challenge on behalf of our customers because we consistently aim our expertise towards current and future security requirements. United Security Providers

unites leading Swiss IT security specialists under a single roof, and our international network of partners assures access to our solutions for clients all over the world. This strategy guarantees true world-class service quality.
