USP CORE WAAP

Application Security in Modern IT Environments

UNITED SECURITY PROVIDERS
ZERO TRUST UNIVERSE

CHALLENGE

- Increasing complexity due to microservices & containerization
- Growing security gaps from agile, dynamic IT environments
- Increased pressure for rapid development cycles while maintaining security
- Traditional WAFs do not cover East-West traffic

SOLUTION

- Cloud & container-native WAAP: Seamlessly protects both cloud and on-premises applications and APIs
- Zero Trust architecture with identity-based micro-segmentation
- Shift-left security approach (DevSecOps): Security already at commit & build
- Secure & compliant: Meets strict data protection and compliance requirements

Core WAAP – cloud-native, agile, and resource-efficient security for web applications and APIs. Flexible, seamless integration with your CI/CD processes.

TRY SCENARIOS

KEY HIGHLIGHTS

- **Seamless integration** into existing DevOps/CI/CD processes – reduces effort by up to 30% and accelerates time-to-market
- **Real app-centric architecture**, no sidecars
- **OWASP Top 10 protection** (Core Rule Set)
- **Deep API protection:** Anomaly detection and schema-based validation
- **ML-powered auto-learning:** Machine learning simplifies configuration and reduces false positives
- **Scalability without compromise:** Delivers high performance and resource efficiency
- **Fast rollout**: Short implementation times – productive in days, not weeks

WHAT SETS US APART

Since 1994, United Security Providers has been supporting companies on their journey to a Zero Trust architecture as experts in cybersecurity.

Focusing on modern Web Application & API Protection (WAAP), we offer deep technical expertise, personalized support at eye level, and Swiss-based operations.
